LISTING AND STATUS OF THE CLAIMS

The following is a complete listing of all the claims in the application, with an indication of the status of each:

1   1. (Previously presented) A commodity selling system for allowing a user to
2   purchase commodities through a network, said system comprising:
3   user terminals, each used by a user, for connection to the network, said user
4   terminals having a mechanism for identifying one or more purchase candidate
5   commodities for said user; and
6   a seller server which stores a time of selection of a purchase candidate
7   commodity of said one or more purchase candidate commodities by a user at said user
8   terminal, and for storing
9   information related to a plurality of purchase candidate commodities,
10 said information being selected from the group consisting of current price, delivery
11 date, customized specifications, and accessories to be included with a purchase, and
12   other information which includes new information or changes related
13 to a purchase candidate commodity that have occurred since said time of selection of
14 said purchase candidate commodity,
15   wherein each purchase candidate commodity is selected from a plurality of
16. commodities appearing on a Web page displayed at one or more user terminals, and
17   wherein said user terminal displays said information and, if there is any said
18 other information, said other information on said user terminal in response to a
19 request from said user terminal.

1   2. (Canceled)

1   3. (Previously presented) A seller server for use in a commodity selling system, said
2   seller server comprising:
3   a web page accessible from user terminals through a network;
4   an information storage means for storing a time of selection of a purchase
5   candidate commodity from a plurality of commodities, and for storing
6   information related to said plurality of purchase candidate

7   commodities, said information being selected from the group consisting of current

8   price, delivery date customized specifications, and accessories to be included with a

9   purchase, and

10   other information which includes new information or changes related

11   to a purchase candidate commodity that have occurred since said time of selection of

12   said purchase candidate commodity,

13   wherein each purchase candidate commodity is selected from said

14   commodities on said Web page; and

15   an information display control means for displaying said information and, if

16   there is any said other information, said other information on a user terminal in

17   response to a request from said user terminal.

1   4. (Canceled)

1   5. (Previously presented) A method of selling online commodities appearing on a

2   Web page of a seller server, the server being accessible from user terminals through a

3   network, said method comprising the steps of:

4   storing, in said seller server,

5   a time of selection of one or more purchase candidate commodities of

6   said commodities by a user at said user terminal, and

7   information related to said commodities selected from the group

8   consisting of current price, delivery date, customized specifications, and accessories

9   to be included with a purchase, and

10   other information which includes new information or changes related

11   to a purchase candidate commodity that have occurred since said time of selection of

12   said purchase candidate commodity;

13   selecting a purchase candidate commodity from said commodities appearing

14   on said Web page; and

15   displaying said information and, if there is any said other information, said

16   other information on a user terminal in response to a request from said user terminal.

1   6. (Canceled)

1   7. (Previously presented) A computer program for enabling a computer to execute

2   selling online commodities appearing on a Web page of a seller server, the server

3   accessible from a user terminal through a network, said program comprising:

4   a first set of instructions of storing, in said seller server,

5   a time of selection of one or more purchase candidate commodities of

6   said commodities by a user at said user terminal, and

7   information related to said commodities selected from the group

8   consisting of current price, delivery date, customized specifications, and accessories

9   to be included with a purchase, and

10   other information which includes new information or changes related

11   to a purchase candidate commodity that have occurred since said time of selection of

12   said purchase candidate commodity;

13   a second set of instructions for selecting a purchase candidate commodity

14   from commodities appearing on said Web page; and

15   a third set of instructions of displaying said information and, if there is any

16   said other information, said other information on a user terminal in response to a

17   request from said user terminal.

1   8. (Canceled)

1   9. (Previously presented). The commodity selling system of claim 1 wherein said

2   information includes customized specifications regarding each purchase candidate

3   commodity.

1   10. (Previously presented) The seller server of claim 3 wherein said information

2   includes customized specifications regarding each purchase candidate commodity.

1   11. (Previously presented) The method of claim 6 wherein said information includes

2   customized specifications regarding each purchase commodity.

1   12. (Previously presented) The computer program of claim 7 wherein said

2   information includes customized specification regarding each purchase candidate

3   commodity.
